

TAKE YOUR ATRAS FURTHER

**Because every step matters:
Automated sample transport of closed tubes**

InTrac is the smart transport system for short distances in the laboratory. Fast, reliable, and flexible, it ensures a continuous sample flow from blood collection to analysis areas – vertically, horizontally or even around corners. The Routing Module enables sample distribution to up to three different destinations.

InTrac acts as the extended arm of your ATRAS system: samples can be transported to ATRAS and from ATRAS to subsequent processes – seamlessly and efficiently.

Optimize your processes

Save time, conserve resources

Automated, continuous sample flow prevents batch processes

Automatic FIFO processing

Reduced walking distances

Reduced hands-on time relieves laboratory staff

Shorter turnaround times (TAT)

Experience true flexibility

InTrac adapts to your laboratory

Seamless integration with ATRAS R4

Overcomes obstacles in the laboratory

Routing Module for customized distribution

Compact, modular design

Scalable solutions that grow with your lab:
